

Roberto Elevator Pitch (Easy English)

Core Framing Line

Roberto is user-centered at the front door and rescuer-centered in operations. Citizens are the signal; rescuers are the response engine – Roberto connects both in one real-time workflow.

Self Intro Line

Hi, I'm ****Xy****. I am a full-stack developer at ****HeyApril****, a US startup building a tax SaaS optimizer for creators. I previously worked as an AI Engineer Intern at ****AIFirst**** and as an AI QA Engineer at ****Boost Capital****, a Singapore startup.

20-Second Version

Hi, I am building ****Roberto****. It is a flood response platform for Metro Manila. It combines flood hazard data, project coverage data, and live incident reporting, so communities can act faster and safer during floods.

40-Second Version

Roberto helps people before and during floods. Before floods, it shows which areas are high-risk and which areas are still under-protected. During floods, citizens can send location pings, coordinators verify and assign, and responders get clear incident context. It also gives local guidance with weather, hazard level, and nearest critical facilities.

60-Second Version (Pitch to Judges)

Roberto is climate adaptation technology for Metro Manila. It combines NOAA hazard zones, DPWH flood-control project coverage, and OCHA city boundaries into one operational map. In incident mode, reports move through a human workflow: Ping, Verified, Prioritized, Assigned, Resolved. For each location, Roberto provides hazard-aware guidance, nearest facilities, and route context. AI assists with local recommendations, but humans remain accountable for decisions. Our goal is simple: help communities understand flood behavior, coordinate faster, and reduce harm.

Coverage Score Defense (Verbatim)

1. What it is: "Coverage score is an infrastructure readiness index, not a flood prediction score."
2. How it works: "It combines spatial protection overlap (raw_coverage_ratio) with project completion (avg_progress) into effective_coverage_score."
3. Why it matters: "It tells us where hazard is high but practical protection is still weak, so coordinators can pre-position teams and prioritize vulnerable areas first."

If You Get Nervous (Safe Recovery Lines)

Use these short lines if you forget your script:

- "Sorry, let me say it simply."
- "Roberto helps people act faster during floods."
- "We combine hazard data, infrastructure data, and real-time reporting."
- "AI helps, but humans make final decisions."
- "Our mission is safer communities during climate disasters."

Optional Tagalog Support Lines

If needed, you can switch briefly:

- "Pasensya na, kakabahan lang. I will explain simply."

- "Tinutulungan ng Roberto ang mga komunidad na makapagdesisyon nang mas mabilis kapag may baha."
- "Pinagsasama namin ang hazard data, project coverage, at real-time reports."
- "AI ay katulong lang. Tao pa rin ang final decision-maker."
